Art Unit: 1616

Claims 1-19 are pending in this application.

Applicants' claims are drawn to safened herbicidal compositions, and methods of use, comprising:

- A) a cyclohexanedione oxime ("-(oxy)dim") herbicide¹, and
- B) mefenpyr (diethyl ester in claim 2, or other derivatives thereof, claim 1).

No data has been provided for the mefenpyr compositions.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combined teachings of Rösch et al (US 5,703,008) and Saunders et al (PCT WO 99/08520).

Rösch et al teach that mefenpyr was a known safener (col 9, Example 3) which was useful for safening cyclohexanedione herbicides (col 4, lines 5 and 61+ to col 5, line 16).

Saunders et al teach that tralkoxydim and butroxydim were known cyclohexanedione herbicides (abstract) which could be combined with known safeners, including mefenpyr-diethyl (p. 7, lines 13-19).

One of ordinary skill in the art would be motivated to combine these references because Rösch et al suggests mefenpyr as a safener for cyclohexanediones, examples of which are further provided in Saunders et al which also discloses mefenpyr as a useful safener.

¹ Alloxydim, butroxydim, clefoxydim, clethodim, cycloxydim, sethoxydim, tepraloxym, tralkoxydim

Art Unit: 1616

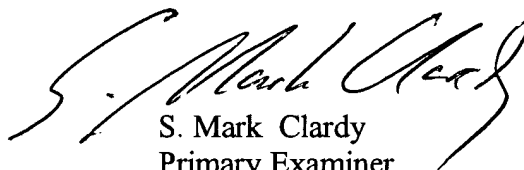

Thus it would have been *prima facie* obvious to the ordinary artisan at the time the invention was made to have combined any of the known cyclohexanedione herbicides such as those recited herein, with mefenpyr, or any suitable antidotally effective derivative thereof, in order to gain a more selective herbicidal composition.

No unexpected or unobvious results are noted; no claim is allowed.
